#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamada (US 6442327) in view of Yoshiro (JP 2002093042) further considered with Keller et al. (US 6587403).

In regard to claim 1, Yamada teaches an information recording and reproduction apparatus comprising: a recording and reproduction section configured to record and reproduce information in and from one recording medium of a first group (fig. 19 element 7) and one recording medium of a second group, which has a smaller recording capacity than said one recording medium of the first group (fig. 19 element 6), however Yamada does not teach a control section configured to display the number of recording media of the second group, which need to be used when the recording and reproduction section records the information recorded in said one recording medium of the first group and a first selecting unit configured to select predetermined information from said one recording medium of the first group (see fig. 1 the user selects the video input signal).

Yoshiro teaches a control section configured to display the number of recording media of the second group, which need to be used when the recording and

reproduction section records the information recorded in said one recording medium of the first group and a display unit configured to display the number of recording media of the second group, which need to be used when the recording and reproduction section records the information selected by the first selecting unit. (see abst where Yoshiro teaches displaying the number of CR-R's required for recording).

The two are analogous art because they both deal with the same field of invention of recording onto a smaller medium from a larger one.

At the time of invention it would have been obvious to one of ordinary skill in the art to provide the apparatus of Yamada with the display of Yoshiro. The rationale is as follows: At the time of invention it would have been obvious to provide the apparatus of Yamada with the display of Yoshiro because it would allow the user to know exactly how many of the smaller medium were required to successfully perform the task.

However, neither teach a second selecting unit configured to select the type of one recording medium of the second group.

Keller et al. teaches a second selecting unit configured to select the type of one recording medium of the second group (column 8 lines 30-35. Keller et al. establishes the fact that the use of two types of media is known in the art and therefore the use of and selection between two or more media in the present invention would be obvious).

The three are analogous art because they deal with the same field of invention of recording onto a smaller medium from a larger one.

At the time of invention it would have been obvious to one of ordinary skill in the art to provide the apparatus of Yamada in view of Yoshiro with the second selection

Art Unit: 2627

unit of Keller et al. The rationale is as follows: At the time of invention it would have been obvious to provide the apparatus of Yamada in view of Yoshiro with the two media of Keller et al. because it would provide the user a choice between media of different sizes.

## Allowable Subject Matter

Claims 3, 5-8, 10-14, 16 and 19-20 are allowed.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Haley whose telephone number is 571-272-0574. The examiner can normally be reached on M-F 8:30am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor. William Korzuch can be reached on 571-272-7589. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have guestions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
